                                                                                                                                                                            Medical Center Dr., Rockville, MD 20850, USA
Address all correspondence to: rbuell@rigr.org Clone 177013 is
from Solanum bulbocastanum chromosome 8. The orientation of the
sequence is from SP6 to T7 end of the clone. Genes were identified
by a combination of several methods: Gene prediction programs
including Genscart (Chris Burge,
http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Solanum bulbocastanum Solanum bulbocastanum
http://genemark.biology.gatech.edu/GeneMark/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant BST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide

Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              http://ftp.genome.washington.edu/RM/RepeatMasker.html).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-647-268-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel isolated nucleic acid molecule encodi a plant disease resistance polypeptide. The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is the bulbcastanum cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated Solanum bulbocastanum late blight resistance nucleic a molecule encoding a plant disease resistance polypeptide, useful fo conferring pathogen resistance to Phytophthora infestans in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                  This invention relates to a novel isolated nucleic acid molecule encoding a plant disease resistance polypeptide. The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is the S bulbcastanum gene sequence of the invention.
                                                                                                                                                                                                                                                                                                                     New isolated Solanum bulbocastanum late blight resistance nucleic acid molecule encoding a plant disease resistance polypeptide, useful for conferring pathogen resistance to Phytophthora infestans in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   plant disease resistance polypeptide; solanaceous plant; potato; late blight disease; fungus; Phytophthora infestans;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Osumi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
This invention relates to a novel isolated nucleic acid molecule encoding a plant disease resistance polypeptide. The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phycophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is that of a chimeric transgene (Sbull gene with a potato Ubil promoter sequence) of the invention.
                                                                                                                                       New isolated Solanum bulbocastanum late blight resistance nucleic a molecule encoding a plant disease resistance polypeptide, useful fo conferring pathogen resistance to Phytophthora infestans in plants.

ð 밁

This invention relates to a novel isolated nucleic acid molecule encoding a plant disease resistance polypeptide. The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
This invention relates to novel isolated polynucleotides that confer CC resistance against late blight caused by the comycete pathogen CC Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, CC and which cause disease resistance to bacteria, fungi, nematodes etc. CC These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be CC described as plant growth regulants. They are useful in providing resistance to Phytophthora infestans, especially in Solanum tuberosum CC (potato) plants to protect against oomycete infection or to demonstrate disease susceptibility. Resistance can be conferred by transformation of existing potato and tomato cultivars with the gene, a procedure that is more straightforward and faster than conventional introgression breeding. This polynucleotide sequence is the Solanum bulbocastanum Rpi-blb DNA of CC the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistant against oomycete pathogens such as Phytophthora infestans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 5; SEQ ID NO 35; 86pp; English.

New isolated or recombinant Rpi-blb nucleic acids and proteins, for providing members of the Solanaceae family e.g. Solanaceae WPI; 2004-010903/01. P-PSDB; ADH51537. Allefs JJHM, (KWEE-) KWEEK EN RESEARCHBEDRIJF AGRICO Van Der Vossen EAG

resistance against comycete infection. tuberosum

Claim 6; SEQ ID NO 48; 98pp; English.

This invention relates to a novel DNA sequence in the field of plant disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of the S bulbocastanum Rpi-blb gene of the invention.

CC This invention relates to novel isolated polynucleotides that confer CC resistance against late blight caused by the comycete pathogen CC Phytophthora infestans, which threatens both tomato and potato crops. CC Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, CC and which cause disease resistance to bacteria, fungi, nematodes etc.
CC These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be CC described as plant growth regulants. They are useful in providing CC resistance to Phytophthora infestans, especially in Solanum tuberosum CC (potato) plants to protect against comycete infection or to demonstrate CC disease susceptibility. Resistance can be conferred by transformation of CC existing potato and tomato cultivars with the gene, a procedure that is CC more straightforward and faster than conventional introgression breeding. This polynucleotide sequence is the Solanum bulbocastanum RGC1-blb coding CC DNA containing an intronic sequence in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistan against oomycete pathogens such as Phytophthora infestans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ID NO 38; 86pp; English.

Claim 6; SEQ ID ö 51; 98pp; English

This invention relates to a novel DNA sequence in the field of plant disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of the S bulbocastanum RGC1-blb gene which is related to the invention.

Sequence 3260 BP; 1012 A; 555 ü 706 G; 987 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to novel isolated polynucleotides that confer CC resistance against late blight caused by the comycete pathogen CC Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, CC and which cause disease resistance to bacteria, fungi, nematodes etc. CT These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be CC described as plant growth regulants. They are useful in providing CC resistance to Phytophthora infestans, especially in Solanum tuberosum CC (potato) plants to protect against comycete infection or to demonstrate CC disease susceptibility. Resistance can be conferred by transformation of CC existing potato and tomato cultivars with the gene, a procedure that is comore straightforward and faster than conventional introgression breeding. This polynucleotide sequence is the Solanum bulbocastanum Rpi-blb genomic CC DNA of the invention.

This invention relates to a novel DNA sequence in the field of plant disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of the S bulbocastanum Rpi-blb gene which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated or recombinant Rpi-blb nucleic acids and proteins, useful for providing members of the Solanaceae family e.g. Solanaceae tuberos with resistance against comycete infection.
                                                                                                                                                                                                                                                                                                                                                 Ή,
